

Java Constructor Outline

Constructors Job:

Constructor Rules:

- 1. Name**
- 2. Case**
- 3. Return type**
- 4. Visibiity**
- 5. Keyword**

Define and provide samples of each

Java's Default constructor

Your Default constructor

Overloading constructor

Parameters

Constructor header

Constructor call

Questions to answer:

What happens if you write any constructor?

How to tell parameters from data members with the same name apart?

What keyword allows access to the current object?

Advanced Topics (We will cover this in other units):

How/When to talk to the parent class in a constructor?

How do constructors relate to polymorphism?
