Java Constructors 9/7/23

Constructors: Role

Intidics Data Members

All printine data member not initialized will be null!

Prove warnt or anoth null PointnersDooppeLon

Not over the variables in the declaration section of the dass and initialize in the same order

Remember to use the supplied parameters to initialize data

By this obstandard parameters to initialize data

By this obstandard parameters to separate data members from

Upen this obstandard parameters and data member have different markes

Create the object:

There is no return statement The object exists at the end of the soughe

Most custom objects need a constructor beyond the default supplied by Java

Constructors: Definition Syntax

Java Constructors 9/7/23

Constructors: Helper methods

| Load to firm out the good of incentioning to discontinuous to discontinuous

Constructors: Calling

▶ Java requires a constructor to be called using the new keyword

▶ Constructors are assigned into a variable of the same Type or parent class

▶ Animal temp = new Cat();

//Animal is a superclass of cat

▷ Cat myCat = new Cat();

▷ Cat betterCat = new Cat("Mr Spicy");

▶ Anonymous instances are often used as an entry to a list or array

▷ parkingLotCars. add (new SpecialCar());

▷ ZooPenguins (index) = new EmperorPenguin();

▶ Without a constructor call the variable only holds nuilf

▷ ZombieHead myZombie;
